## Minnesota Soil Health Coalition Corporate Sponsorship 2025

We invite you to partner with us as a sponsor—levels range from \$700 to \$5,000—and gain meaningful brand visibility through alignment with a trusted, farmer-led organization working at the intersection of agriculture and conservation across Minnesota.

### Our Mission

Minnesota Soil Health Coalition is a farmer-led nonprofit committed to advancing regenerative agricultural practices across the state. Our mission is to inspire *producer driven education, outreach, and adoption utilizing information exchange to promote the principles of soil health practices*. By improving soil health, we build financially sustainable farms, healthier ecosystems, and stronger rural communities.

### What We Do

- **Peer Mentor Network:** Experienced farmers provide one-on-one mentorship, sharing practical knowledge and proven strategies to help peers adopt successful soil health practices.
- **Education & Technical Assistance:** We host 40+ hands-on field days, offer individualized technical support, and share the latest soil health research with our producer community.
- **Resource Sharing:** We offer programs to reduce the cost and risk of adopting soil-friendly practices, such as cover cropping and reduced tillage.

### Why It Matters

Minnesota's farmers face mounting pressures, from degraded soils to economic instability. Soil health practices improve productivity, reduce erosion, and make farms more resilient to extreme weather patterns, all of which support local producers and communities. But adopting these practices requires up-front investment and trusted support. That's where we come in.

### Your Impact

As a sponsor, your support will help expand farmer mentorship, increase access to critical equipment and training, and grow our footprint across Minnesota. Together, we can build a more resilient agricultural future—rooted in healthy soil, thriving farms, and sustainable communities.
